

MCC RiverWatch Handout

RiverWatch Project

December 19, 2019

Overview

Currently there is no environmental program in Viking available. We decided to teach 2nd graders basic RiverWatch skills.

We first gave them a 10 question Kahoot to see what the 2nd graders would know. Next, we divided them into two groups and one half learned at the stream table. In the other half of the class, they play Pictionary. In both sessions, we discussed the keywords for RiverWatch. When we were ending the lesson, we played the same Kahoot again to see if they learned anything.

Goals

1. To teach our second graders about our river basin and local waterways.
2. To learn about key terms and more about our rivers around our area.
3. To show them how a stream table works.

Outcome

Second graders now know more about our local river, RiverWatch, and river terms. The second graders enjoyed a lesson from older students. The high schoolers also felt more confident in their knowledge after teaching the younger students.
